

GLOBAL INVESTIGATIONS AND COMPLIANCE

NAVIGANT CONTINUOUS ASSET MONITORING TOOL

Speaker 1: The Consumer Finance Servicing Industry is in a state of change and volatility. It is understaffed, under cost pressure, and constantly trying to stay in front of regulatory change. To manage the business, and associated operational and compliance requirements has been historically siloed, intensely manual, time-consuming, and prone to human error.

Speaker 1: To solve for this, Navigant has developed CAM, our Continuous Asset Monitoring web-based analytics tool, that automates data and analytics on a portfolio-wide basis. CAM transforms the traditional methods of asset monitoring to a more efficient, accurate, and automated process that saves time and labor costs, while expanding risk surveillance.

Speaker 1: Loan testing is in Navigant's DNA. Through the years, we have manually tested millions of loans. We have taken that deep product knowledge, distilled it down, and transformed it into a powerful, automated solution that uniquely offers both compliance and operational performance monitoring, under a single platform. It provides unparalleled portfolio transparency, utilizes data analytics to test 100% of loans in a portfolio, and centralizes servicing oversight on a single platform, resulting in improved compliance, addressing Federal, State, and local regulatory requirements across all lines of defense. It allows insights and views across products, services, states, and various regulations and performance metrics.

Speaker 1: CAM delivers the following features to benefit your business: Continuous Monitoring Compliance Analytics, which identifies loans at high risk for regulatory violations and facilitates sampling, root cause analysis, and prevention of systemic issues. Credit Reporting Metro 2 Data Analyzer, which reviews all data fields submitted to credit reporting agencies for compliance with the Credit Reporting Resource Guide, and checks for other illogical conditions that impact your Metro 2 data files, facilitates identifying potential programming and data quality issues, and checks the accuracy and integrity of the data. Customer and Regulatory Complaint Analyzer, which performs trend analysis of complaints across services, channels, servicing issues, controllability, and includes a heat map by state. Operational Metrics, which assesses portfolio performance, including roll rates, delinquency statistics, interest rates, and other key asset management metrics critical to your business.
